

Leyard Europe Overview

LEYARD EUROPE is the European branch of Leyard Optoelectronics, the global market leader for LED video displays, narrow pixel pitch LED and the indoor LED video wall market (Futuresource 2022).

Since its establishment in April 2013, LEYARD EUROPE has strengthened LEYARD's activity in Europe through a series of successful projects - control rooms, automotive design centres, conference rooms and shopping centres, stadium projects, cultural events, railways, and television studios.

Visualization technology from Leyard includes best-in-class LED products for indoor and outdoor applications, professional LCD products from Planar, as well as video wall controllers and software.

With our production facilities in Presov (Slovakia), we are able to offer customers in our region a broad selection of display solutions "Made in Europe" for applications ranging from corporate applications to control rooms, digital signage and broadcast to events and large-scale visualization.

Thanks to our strong presence in our European target markets, we are also able to offer local support for design, installation and maintenance.
